

The XYZ Wear Corporation plans to develop (from system analysis to operation testing) the web site for selling wears through Internet and to form the new whole system as follow:

Topic 4

1. Identify and choose the user stories to be developed as the 1st version of website.
2. Specify completely their related task cards/ test cards.
3. Once finished, show the way to assemble this version with the next versions (if any).
4. Identify a suitable approach to build the prototype of the next version.
5. Is your program well structured? Does the way to assemble different versions of your program make good your program? Explain.
